

THE
**CYBER
RESILIENCE
CENTRE**
FOR THE NORTH WEST

Cyber Security Services Guide

We provide security, stability and safety
to your business organisation.

The Cyber Resilience Centre is a not-for-profit, police-led partnership, providing affordable, professional cyber security services to small businesses.

nwcrc.co.uk

A not-for-profit public, private and academic partnership

The Cyber Resilience Centre is a not-for-profit organisation committed to helping protect businesses in the North West region from cybercrime.

The Cyber Resilience Centre is a partnership between the North West Regional Organised Crime Unit, North West Police Forces and Manchester Digital, working closely with Academia, Businesses, and Third/Public Sector organisations.

We were the first Centre to launch in the country, leading a growing network of regional centres being established to form a national network of Cyber Resilience Centres.

We are here to provide businesses of all sizes with access to affordable cyber security services, the latest advice and support from leading law enforcement and industry experts and help them take simple steps to protect their business from unscrupulous cybercriminals.

Our Guidance Council

The Guidance Council is made up of representatives from across Policing, the private and public sectors and academia and is currently Chaired by Baroness Beverley Hughes, Deputy Mayor for Greater Manchester.

Its role is to represent the wider cyber interests of the North West business community and ensure the activities of the NWCRC support the local economy, skills development, Police & Crime Plan priorities and the GM Digital Blueprint.

Our Trusted Partners

Our Trusted Partners are official providers of Cyber Essentials Certification and have been accredited by the Information Assurance for Small and Medium Enterprises Consortium (IASME).

Our Trusted Partners can help your organisation achieve Cyber Essentials and Cyber Essentials Plus Certification and offer a range of cyber security services tailored to suit your business needs.

"We exist to help protect small businesses from online crime."

Chris Maddocks

Detective Chief Inspector | North West Regional Organised Crime Unit
Head of Fraud & Cyber Crime | Cyber Resilience Centre

Why do we exist?

39% **£19,400**

of businesses have identified cyber security breaches or attacks

the average annual cost for medium and large businesses that lost data or assets after breaches

Only
31% **17%**

of businesses said they were attacked at least once a week

of businesses have had training on cyber security in the last 12 months

Affordable, professional cyber security services for your business.

We provide a range of affordable, professional cyber security services that help you assess, build and manage your organisation's cyber security capabilities, build confidence, understand your vulnerabilities and secure your business.

Our skilled Cyber Security Consultants work with you to understand your needs, working ethically alongside seconded Police officers to ensure you only invest in what is necessary,

Security Awareness Training

Ensure your staff are aware of the risks associated with cybercrime and how to protect themselves and your business.

Security awareness training provides simple and effective knowledge for people to understand their environment and provides the confidence to challenge when something doesn't look right. The training is focused on those with little or no cyber security or technical knowledge and is delivered in small, succinct modules using real-world examples.

Simulated Phishing Exercise

A simulated phishing exercise helps to raise your staff's awareness of phishing emails and guards your business against the growing trend of social-engineering threats. By training your employees to know what a phishing attack looks like, they are more likely to identify and report scams.

Network Vulnerability Assessment

Find out how much damage an attacker could do if they did manage to breach your network or launch an attack from the inside.

Website Vulnerability Assessment

How secure is your website? Does it contain vulnerabilities just waiting to be exploited? Our assessments can help identify these weaknesses so you can fix them.

Digital Footprint Assessment

Using minimal information, we employ the same techniques and tools used by hackers to help discover what information you expose online and how criminals might use this to launch attacks against your business.

Start your Cyber Security Journey
